

Examples

These URLs are equivalent

notes://server1/mail/cblatnic.nsf/(\$inbox)?openview
 notes://server1/85256E6100567538/38D46BF5E8F08834852564B500129B2C

Opening the inbox

notes://server1/mail/cblatnic.nsf/memo?openform

Create a new memo

notes://server1/mail/cblatnic.nsf/0/6A3E168BA614D83D852572FB00520809

Open a document

About

Introduced in Notes 6...A URI that uses notes:// as the protocol

Supported in MindManager 6 SP1! Thanks, Mindjet and Eric Mack!

Can be used within Notes or in other applications

Problems? In Windows, registry is updated so association with Notes is known HKEY_CLASSES_ROOT\Notes
 Do you have access to the element?

General construction

notes://servername/databasename/ element

notes://servername/dbReplicaID/ element

notes:///dbReplicaID/ element

Commands for opening elements are generally the same as on the web

Just like on the web, you can use /0/ for the view

?OpenDatabase
 ?OpenView
 ?OpenDocument
 ?OpenForm

Omitting the server uses local (or finds on server if applicable)

Cool Feature! The URL goes to the correct database...

Ways of finding Notes URLs

NotesDatabase
 NotesView
 NoteDocument
 NotesForm
 NotesAgent

In LotusScript, can be found using NotesURL property of various classes

Current URL appears in address bar for easy copy and paste functionality

Turn on address bar and click on drop-down twice

Open the document properties box and click on the <+> tab. URL is listed in the 'Identifier' field

Another easy way (care of Alan Lepofsky and friends)

See the "Easy to use Notes Database Links" article on Alan's blog
